Php parse error

Php parse error

Return Values. On seriously malformed URLs, **parse_url()** may return FALSE. If the component parameter is omitted, an associative array is returned. Predefined Constants. The constants below are always available as part of the **PHP** core. Note: You may use these constant names in **php.ini** but not outside of **PHP**. Everyone runs into syntax errors. Even experienced programmers make typos. For newcomers it's just part of the learning process. However, it's often easy.
